Anadromous Fish Law Memo

NRLI

Issue 48 January 1989

NATIVE FISHING RIGHTS AND ENVIRONMENTAL PROTECTION IN NORTH AMERICA AND NEW ZEALAND: A COMPARATIVE ANALYSIS

This Memo examines native rights to take fish in the U.S. Pacific Northwest, British Columbia and New Zealand. Native fishing rights ought to be distinguished from native land reserves or claims to land. Fishing rights are nonterritorial in character: that is, they do not depend upon ownership of shoreside or submerged lands. In legal terms, they are not fee simple rights but rather profits a prendre.

But their character as non-fee interests does not mean these profits are insignificant rights. On the contrary, as this Memo shows, they include not only access rights to the resource (easements), but also an insulation from governmental regulations, except regulations necessary to preserve the resource. In addition, they can include a right to a share of the harvest and, in all probability, a right of environmental protection against activities that damage fish or fish habitat. It is this latter right, a negative servitude to restrain a variety of developmental activities, which gives native fishing rights an environmental dimension. This environmental dimension is also the means by which non-native fishermen may come to see the value of, if not readily embrace, this recognition of native rights to fish.

This Memo begins by examining the native fishing rights situation in the U.S. Pacific Northwest, where those rights have received the most judicial attention. There are peculiar aspects to the U.S. situation, especially the fact that these fishing rights were recognized by judicially enforceable treaties, but this analysis suggests that the principles established in the Pacific Northwest cases are effectively being applied in British Columbia and New Zealand. In the latter jurisdictions, where native rights have been ratified by constitutional and statutory provisions, respectively, judicial recognition of the right to take fish is of much more recent origin and its ultimate contours much less certain. However, the evidence so far is that the fishing right includes within it an environmental right of considerable dimension.

The value of any comparative legal analysis is limited by the constitutional, political, and institutional idiosyncracies of individual countries studied. It is true that the constitutional and political structures of the 3 nations studied here are quite different, and their responses to the native fishing rights issue are distinctive. For example, in the U.S. federal court interpretation of enforceable, century-old treaty promises have been crucial; in Canada, on the other hand, courts are interpreting a relatively recent constitutional guarantee; while in New Zealand, legislative provisions, including the establishment of an advisory tribunal, have prompted the courts to reconsider the meaning of a 150-year-old treaty. Nevertheless, underlying the disparate treaty, constitutional, and statutory provisions is similar legal tradition: the English common law. This Memo concludes that the similarity of results in the 3 countries' articulation of the nature of native fishing rights is due in no small measure to the fact that they share the same common law roots.

Those owed thanks for this Memo include the Faculty at the University of Melbourne Law School, especially Dean Michael Crommelin; Constance Hunt, Professor of Law at the University of Calgary and Executive Director of the Canadian Institute for Natural Resources Law; Dr. William Hodge, Deputy Dean, University of Auckland School of Law; B.J. Cameron of the New Zealand Law Commission; and Marlyn Twitchell, Class of 1988, Lewis and Clark Law School. Errors are the editor's alone, however.

I. The U.S. Pacific Northwest

The Pacific salmon runs of the North American west coast have been the subject of disputes throughout this century.[1] Several reasons account for this. First, the Pacific salmon which spawn in virtually every river from the Sacramento in California to the Yukon in Alaska are of immense economic and cultural value. Second, their predictable return to natal streams makes harvesting relatively easy, especially with nets. Third, their vast migrations -- most species travel thousands of ocean miles -- and their environmental sensitivity complicate resource management.

In the United States management is further complicated by federal-state tensions. Wildlife regulation in America has always been a matter the federal government left largely to the states. However, in the 19th century the federal government negotiated a number of treaties with Pacific Northwest Indian tribes that reserved to the tribes the "right to take fish" at their usual and accustomed fishing grounds "in common with" white settlers.[2] These bargained-for rights to harvest salmon imposed an inevitable federal dimension upon state-dominated management systems. The imposition has hardly been an easy one; in fact, the evolution of the Indian "right to take fish" has been one of the federal courts imposing limitations on state regulation of salmon fishing.[3]

The treaty right to take fish has always been recognized as having a commercial component to it. The Indians were commercial fishers at treaty time, trading salmon with other Indian groups for food, raw materials and manufactured goods not available locally, and selling large quantities of salmon to white settlers.[4] The tribes clearly understood the treaties as securing to them the right to continue to fish as they had previously.[5] In the years immediately following the signing of the treaties, there were few conflicts over treaty fishing rights. The resource was abundant[6] and the non-Indian fishery was insignificant.[6] However, in the latter part of the 19th century, technological developments, such as the tin can and refrigerated railroad car, transformed salmon into a valuable export commodity.[7] Consequently, non-Indian commercial fishers began to employ new harvesting methods, such as fish wheels and gasoline-powered ocean trollers, to effectively preempt the Indian fishery (and overharvest the resource as well).[8] The resulting conflicts first pitted Indian against non-Indian fishers; but they soon also involved the issue of whether and under which circumstances the states could regulate the Indian right to fish.

A. An Access Right

The story begins some 85 years ago, in United States v. Winans.[9] In that case the United States Supreme Court held that the Stevens Treaties of the 1850s guaranteed to the signatory tribes -- who were "not much less dependent upon fishing than the air they breathed"[10] -- a right to cross a fee title holder's property in order to access their usual and accustomed fishing grounds, even though his homestead title from the federal government said nothing about a native right. Despite the fact that the state of Washington granted the landowner a license to operate a number of fish wheels, which similarly failed to mention the Indian right to fish, Justice McKenna identified the right to take fish as imposing a prior servitude on the title of the burdened property owner.[11] Recognizing this right was not inequitable, since the Indian fishing right satisfied all the elements of a property interest the common law recognized as an equitable servitude.[12] The Winans case thus established the fishing right as a property right that burdened both the title of federal land grantees and state regulatory activities, even though the state was not a party to the treaty.

Soon after Winans, the Supreme Court applied its principles to land not expressly ceded by the signatory tribes to the United States but nevertheless habitually used by them as fishing

11. Id.
12. Equitable servitudes "run" with the land (that is, they burden and benefit nonparties to the original agreement) if: (1) the parties intend it to bind remote successors; (2) there is notice (actual, record or inquiry) to the burdened party; (3) the burden "touches and concerns" the land (i.e., is economically valuable). See generally R. Cunningham, W. Stoebuck & D. Whitman, The Law of Property §§ 8.24-8.28 (1984). There is little doubt that the treaty negotiators intended the fishing servitude to benefit succeeding generations or that the servitude is economically valuable. And in Winans the Court determined that there was actual notice of the tribal right. 198 U.S. at 372.

grounds. The Court held that the fishing rights burdened the land in question because signatory tribes would have understood the treaty as reserving those customary locations.[13] Construing Indian treaties as the tribes would have understood is one of the canons of treaty construction by which the U.S. courts interpret Indian treaties.[14] In addition, the courts construe the treaties liberally in favor of the interests of the tribes and resolve ambiguities in their favor. These canons stem from judicial recognition of the unequal bargaining position of the parties to the treaties.[15]

Over the years, the U.S. Supreme Court expanded the treaty right to take fish from a mere access right to a right to be free from state-imposed license fees, on the rationale that the treaty fishing right was a "reserved" right, one that preexisted the state itself.[16] But over two decades ago, in 1968, the Court determined that the state of Washington could regulate the treaty right to fish for conservation purposes,[17] despite protests that the state's conservation purposes included conservation of fish for non-Indian fishers as well as preservation of the resource itself.[18] Just 4 years later, however, the Court was forced to reconsider the implications of its earlier decision and ruled that a ban on net fishing, even though facially non-discriminatory, violated the treaty because it worked exclusively against the Indian fishery.[19] To overcome the state's propensity to impose the conservation burden on the Indian fishery, the Court called for the state to allocate the Indian fishery a fair share of the resource.[20]

20. Id. at 48 (instructing the state to "fairly apportion" the fishery).

B. A Harvest Share

That fair share had already been ordered by a district court judge in Oregon, who also established some principles of enduring significance. In Sohappy v. Smith,[21] Judge Belloni ruled that (1) state regulation must be the least restrictive regulation consistent with preservation of the resource; (2) the Indian fishers must be treated separately from the remainder of the fishery; and (3) the treaty Indians were entitled to certain procedural protections, including notice and an opportunity to be heard and participate meaningfully in the formulation of fishing regulations.[22]

Some 5 years later, another district court quantified the Indians' "fair share." In United States v. Washington (Phase I), Judge Boldt determined that the treaty Indians were entitled to half of the harvestable fish to pass their fishing grounds.[23] This right, an acknowledged commercial right, was largely confirmed by the U.S. Supreme Court in 1979.[24] In affirming the 50/50 allocation, the Supreme Court ruled that the state could not use its regulatory powers to "crowd out" the Indian fishery.[25] According to the Court, the Indians were entitled to more than a right to dip their nets into the water and come up empty, since the central purpose of their treaties was to ensure the tribes a "livelihood -- that is to say, a moderate living."[26] The 50/50 split was assumed to supply the tribes with the moderate living that the Court called for, although a lesser amount could be judicially approved if a tribe dwindled to a small number or abandoned its fishery.[27]

The Phase I litigation also confirmed the Indian tribes' status as regulators of access to the resource of their own members. They, thus, can set their seasons free of state interference and enforce tribal laws at their off-reservation fishing grounds to control their fisheries.[28] After the Supreme Court handed down its Phase I opinion, the tribes pressed their rights further. In Phase II of the case they sought judicial confirmation of a share of the hatchery fish governmentally-produced, as well as a right

to enjoin activities damaging the habitat upon which the fish depended. The courts had little difficulty in determining that the Indians had rights to hatchery fish, which effectively compensated for the natural fish lost as a result of the states' authorization of numerous activities damaging the fishery and its habitat.[29]

C. An Environmental Right

The courts have had more difficulty with the alleged habitat protection right, however. The tribes asked only for a negative right; that this, a right to restrain damaging activities -- not a right to demand the state to take affirmative action. But they insisted that the right ran against not only the state but also the federal government and third parties. District Court Judge Orrick agreed with these allegations, interpreting the Supreme Court's Phase I opinion to recognize that the treaty guaranteed the tribes a meaningful opportunity to take fish.[30] He therefore concluded that implied within the treaty right was a right to restrict the state, as well as the federal government and third parties, from undertaking activities that damage the fish runs.[31]

According to the formula devised by Judge Orrick, where the allocation of fishing rights remained at 50/50 under the Supreme Courts' equal sharing principle,[32] there was a presumption that the Court's "moderate living" principle had not been fulfilled.[33] Given this presumption, according to the district court, if the tribes could show that a proposed activity would produce fishery habitat degradation, the burden shifted to the state to show that the tribes' moderate living needs would not be impaired.[34] After a good deal of confusion,[35] the Ninth Circuit Court of Appeals finally determined that fixing the scope of these rights in a proceeding not based on any concrete facts was impermissible.[36]

Nevertheless, there should be little doubt that an environmental right accompanies the treaty right to take fish, as every judge who has considered the issue on its merits has concluded that such a right exists.[37] In fact, in specific factual contexts the treaty right has enjoined the construction of dams,[38] altered dam operations,[39] limited irrigation withdrawals,[40] and blocked construction of a marina.[41] Thus, the environmental right is powerful enough to protect waterflows upon which the fish are dependent and appears to give the tribes tantamount to a veto over developmental activities damaging the fishery resource, especially projects that block access to fishing grounds.[42] At a minimum, the right should be construed to require administrators to (1) ensure that the tribes participate fully in their decision-making processes, (2) adopt the least burdensome alternative on fishery resources, (3) include all feasible mitigating measures in their proposals, and (4) convince a court that the project will not adversely affect treaty property rights.[43]

35. A Ninth Circuit panel first overturned Judge Orrick's decision on the environmental issue, 694 F.2d 1374 (9th Cir. 1982) (environmental right only requires the state to take "reasonable steps" commensurate with its ability and resources to protect fish habitat). This decision was subsequently vacated by the Ninth Circuit en banc in an unpublished opinion, on the ground that there was no jurisdiction to review the district court's rulings on motions for partial summary judgment under § 54(b) of the Federal Rules of Civil Procedure (28 U.S.C. § 1292(b)). This decision was in turn vacated by the decision cited in below note 36.

Callaway, No. 72-211 (D. Or. Aug. 17, 1973) (Columbia River hydroelectric operations cannot "impair or destroy" treaty fishing rights).

40. U.S. v. Adair, 723 F.2d 1394 (9th Cir. 1983) (treaty right dates from "time immemorial" and includes water flows necessary to support fishing as necessary to support the livelihood of tribal members).

41. Muckleshoot Indian Tribe v. Hall, No. C88-3842, slip op. at 31 (W.D. Wash. July 5, 1988) (LEXIS, GENFED Library, Dist. file) (enjoining a dredge and fill permit that would have blocked access to tribal usual and accustomed fishing grounds, ruling that "the treaty fishing right cannot be impaired or limited without an act of Congress").

42. Id. at 29 (amount of damage to treaty fishing right not to be balanced against project benefits, not "a factor to weigh in reaching its decision").

43. See U.S. v. Washington (Phase II), 694 F.2d at 1389, 1391 (panel decision) (concurring opinion of Judge Reinhardt). Judge Reinhardt's criteria also included compensation to the tribes for any losses sustained. However, it is clear that administrators lack the authority to terminate treaty property rights; Congress must

The scope of this environmental right is considerable, not only because of the immense migratory range of the salmon runs but also because it is not limited to tribal land reservations. The treaty right attaches to all "usual and accustomed" fishing grounds. These have been judicially determined to exist at numerous locations throughout the Northwest, including not only rivers and streams but also bays and ocean waters.[44]

The right to a share of the harvest springs from the treaty language promising the tribes a right to fish "in common" with others. The environmental right, however, does not appear to necessarily depend upon express treaty language, since it has been implied in the existence of Indian reservations -- in a manner similar to the reserved water rights doctrine.[45] Thus, tribes without treaties have secured sufficient water flows to protect on-reservation fisheries.[46] This implied right is limited to the boundaries of the reservation and does not entitle the tribe to a harvest share. Nevertheless, it can affect off-reservation activities that have on-reservation effects.[47]

D. A Negotiating Tool

Judicial recognition of the treaty fishing right has enabled the Pacific Northwest tribes to become a significant force in water resources management issues on the state, national and international levels. In 1980, the tribes formed a key part of a coalition that convinced Congress to pass the Northwest Power Act,[48] a statute calling for a program to restore Columbia River Basin fish runs depleted by dam construction and operations.[49] The statute recognized the tribes as resource managers on an equal basis with the states,[50] and the fish restoration program authorized by the Act gave the tribes unprecedented authority to control water flows on the Columbia River to benefit salmon runs.[51]

In 1985, the tribes were instrumental in helping to negotiate the U.S.-Canada Pacific Salmon Treaty which will significantly restructure ocean harvest practices, in large measure to uphold the Indian right to take fish.[52] The U.S. legislation implementing the Pacific Salmon Treaty considers the tribes on an equal basis with the states, and gives them direct representation on the institutions established to implement the Treaty.[53]

In 1987, the state of Washington revised its timber management regulations to supply greater protection for fish habitat.[54] The impetus for doing so was a desire to avoid litigation based on the implied environmental right that the tribes were likely to bring.

Finally, in late 1988, U.S. District Court Judge Marsh approved a settlement agreement establishing a long-term comprehensive plan for managing the anadromous fish runs on the Columbia River. The plan, a response to the Sohappy litigation,[55] establishes a framework for allocating Indian and non-Indian harvests and developing basin management plans to rebuild the fish runs.[56] The plan also secures a fishery management role for the tribes, first recognized by the courts.[57]

Thus, judicial recognition of the environmental component of the treaty right to fish was rapidly given legislative and even international sanction. Moreover, because of the "co-tenancy" nature of the right, the beneficiaries of the environmental component included non-native com-

mercial and sport fishers, who, ironically, were the most vocal opponents of the right during the 1970s. The pattern of judicial recognition prompting action on the part of more representative branches of government, coupled with the non-excludable nature of the environmental benefits,[58] has served to democratize the treaty right to fish. This pattern is being repeated in both Canada and New Zealand.

E. Comparing the Treaty Right With An Aboriginal Right

The treaty right is in a sense a "recognized" aboriginal right; however, its content is determined by evidence of the same customary practices needed to establish an aboriginal right.[59] However, the express treaty recognition means that the treaty fishing right is a durable one: its implied easements and negative servitudes survive homestead patents and statehood.[60] They may be extinguished only by clear, unambiguous federal statutory language.[61] Even then, payment of just compensation is constitutionally required.[62]

The compensation requirement, along with the right to a specified harvest share, distinguishes the treaty fishing right from an aboriginal fishing right. In the U.S. extinguishment of the latter does not require payment of compensation,[63] nor does it insulate the right from state regulation.[64]

The U.S. treaty fishing right has evolved over a century of judicial interpretation into a significant economic and environmental right. While the precise contours of the latter have yet to be sketched, its outlines may provide a useful benchmark for other jurisdictions, such as Canada and New Zealand, where similar rights are evolving.

II. British Columbia

Pacific Northwest natives inhabiting British Columbia were just as dependent on salmon runs as the Indians of the U.S. Pacific Northwest.[65] The Fraser River runs, now the largest on the Pacific Coast, were particularly prized. But unlike their neighbors across the border, most British Columbia tribes never signed treaties, largely due to a lack of funds to purchase Indian lands and a fair amount of provincial recalcitrance.[66] However, the federal government did set aside numerous Indian land reserves, and in the process "appropriated" fishing rights for natives, often at locations off the reserves.[67] Thus, in British Columbia native fishing rights might be based on treaty, land reserves, appropriation, or aboriginal title.

Another feature of the native fishing right in British Columbia that distinguishes it from the U.S. right is that, in Canada, regulation of fishing is a largely federal matter,[68] although implementation is in fact accomplished by provincial regulations. Thus, the federalism tensions so evident in the U.S., if not absent in British Columbia, are at least below the surface.

A. Aboriginal Title in British Columbia

The foundation of Indian law in Canada was the Royal Proclamation of 1763 which (1) established the Crown's responsibility for protecting Indian tribes, (2) reserved hunting grounds for them, and (3) prohibited private purchases of their lands.[69] The Proclamation was judicially recognized as the source of Indian title a hundred years ago,[70] but its application to British Columbia was never clear.[71] Throughout the 20th

58. The beneficiaries of the treaty fishing environmental right include not only non-native fishers, but, hunters, recreationalists, and drinkers of municipal water.

59. Compare, e.g., F. Cohen, above note 14, at 492 (discussing the elements of proof of an aboriginal title claim) with Phase I, 384 F. Supp. at 350-53, 359-82 (treaty dependent, including its commercial nature, on pre-treaty activities).

60. See, e.g., Winans, above notes 9-12 and accompanying text.

61. F. Cohen, above note 14, at 493.

62. Id. at 485 (citing Mitchel v. U.S., 34 U.S. (9 Pet.) 711 (1835)).

63. Tee-Hit-Ton Indians v. U.S., 348 U.S. 271 (1955).

64. See F. Cohen, above note 14, at 443 (citing State v. Newell, 84 Me. 465, 24 A. 943 (1892); State v. Moses, 70 Wash. 282, 442 P.2d 775 (1967)).

65. See, e.g., H. Brady, Maps and Dreams, Indians and The British Columbia Frontier (1981); W. Duff, Indian History of British Columbia (1964).

66. The tragic story of Indian policy in British Columbia is set forth in some detail in P. Cumming & N. Mickenberg, Native Rights in Canada (2d ed. 1972), ch. 17. A number of small land conveyances, which the Canadian Supreme Court interpreted to be treaties, in Regina v. White and Bob, 52 D.L.R. (2d) 481 (1964), were signed between tribes on Vancouver Island and Governor James Douglas in the 1850s for lands surrounding Fort Vancouver. In addition, a few tribes in northwestern British Columbia were included in Treaty No. 8, negotiated in 1899. But the vast bulk of the province has neither been the subject of a treaty nor a Natural Resource Agreement such as those in effect in the 3 prairie provinces. See id. at 211 n.23.

67. See R. Bartlett, Aboriginal Water Rights in Canada: A Study of Aboriginal Title to Water and Indian Water Rights 113 n.111 (1988) (noting that appropriations of fishing rights were made "in every part of the province").

68. Fisheries Act, R.S.C. c.F-14 (1970). On the other hand, regulation of hunting, largely a provincial matter, resembles the U.S. situation. See below notes 82-83.

69. R.S.C. 1970 App. 11 No. 1, at 123-29.

70. St. Catherine's Milling and Lumber Co. v. The Queen, 14 A.C. 46 (1888) (J.C.P.C.).

71. See P. Cumming & N. Mickenberg, above

century, British Columbia tribes maintained that, absent a treaty or other agreement ceding their lands and fisheries, they retained title.[72] Not until the 1960s, however, did the courts begin to consider whether Indian title persisted in the province, and their initial answers were negative -- either because the 1763 Proclamation was the sole source of Indian title and inapplicable to British Columbia, or because Indian title was extinguished by colonial land ordinances prior to British Columbia's joining the Dominion in 1871.[73]

In 1973, however, in the landmark Calder case, the Canadian Supreme Court indicated that aboriginal title was not dependent on the Royal Proclamation.[74] But the Court split on the issue of whether aboriginal title had been extinguished, 3 justices ruling that the colonial land ordinances worked an implied extinguishment, 3 others requiring legislation showing a "clear and plain" indication to extinguish Indian title, a standard which general land ordinances did not meet.[75] While Calder made a judicial declaration of aboriginal title possible in British Columbia, it clearly did not resolve the issue. Some provincial courts employed Calder to declare expansive aboriginal rights, but, with one exception, these results have not survived appeal.[76] Nonetheless, they have prompted negotiations leading to comprehensive land and resource settlements in particular areas, especially in the North.[77]

Until the Sparrow case,[78] British Columbia courts interpreted Calder narrowly,[79] leaving the issue of native common law rights unsettled. However, the tide began to turn in the mid-1980s. In 1985, the British Columbia Court of Appeal upheld an injunction halting logging pending a trial on an aboriginal land claim in the Meares Island case.[80] Moreover, the Canadian Supreme Court gave a ringing endorsement to native land rights in Guerin v. The Queen.[81]

B. Fisheries Act Regulation

Because fishery regulation in Canada is primarily a federal matter, it does not involve the complexities of provincial hunting regulation including section 88 of the Indian Act.[82] More-

---

note 66, at 30 n.31 (citing a number of cases holding that the Proclamation did not apply to the Canadian Far North or West, because those lands were not subject to British sovereignty in 1763).

72. See id. at 188-91. Indian title clearly includes the right to hunt and fish. R. v. Issac, N.S.R. (2d) 460, 498 (N.S.S.C.A.D.), 9 A.P.R. 460, 498 (1975); Attorney General for Ontario v. Bear Island Foundation, 1 C.N.R.L. 1, 38-39 (Ont. S.C. 1985) (so long as no damage or prejudice to property).

73. For example, the trial court in Calder v. Attorney General, 71 W.W.R. 81, 8 D.L.R. (3d) 59 (1969), ruled that Indian title was extinguished by colonial land legislation, while the British Columbia Court of Appeal held that Indian rights in British Columbia must be grounded on treaty, proclamation, or contract, 74 W.W.R. 481, 13 D.L.R. (3d) 64 (1970).

74. Calder v. Attorney General, 34 D.L.R. (3d) 145 (52-53, 156 S.C.R. 313, 322-23, 328 (1973) (Judson J.) (proclamation not exclusive source of Indian title), 200-01, S.C.R. at 390-92 (Hall J.) (aboriginal title not dependent on treaty, executive order or legislative enactment).

75. Id. at 158-60, S.C.R. at 330-34. These ordinances generally declared Crown fee ownership of all unreserved and unoccupied lands and minerals. For Justice Hall and his colleagues, Crown fee ownership was not inconsistent with Indian title -- which is not fee title, since it is inalienable except to the Crown. See id. at 173-74, S.C.R. 352-53.

76. See Re Paulette, 42 D.L.R. (3d) (1974), rev'd, 630 D.L.R. (3d) 1 (1976), aff'd 72 D.L.R. (3d) (1977) (on the ground that a caveat cannot be filed against unpatented Crown land); Kanatewat v. James Bay Development Corp., 1974 R.P. 38 (CS), rev'd 1975 C.A. 166 (QCA) (any aboriginal rights that might survive are too vague to justify an injunction). The case that survived was not appealed, Hamlet of Baker Lake v. Minister of Indian Affairs and Northern Development, 107 D.L.R. (3d) 513 (1980) (recognizing Inuit aboriginal title in Northwest Territories and finding no extinguishment because of lack of clear and plain legislative intention to extinguish). For a discussion of these cases, see Bartlett, Aboriginal Land Claims at Common Law, 15 West. Aus. L. Rev. 293 (1983).

77. See below notes 155-58 and accompanying text.

78. See below notes 101-13 and accompanying text.

79. For example, the trial judge in Sparrow v. The Queen, interpreted Calder to mean that aboriginal rights had to be based on treaty, proclamation, or contract. The county appellate court interpreted Calder to mean that "aboriginal rights no longer exist" in British Columbia. See Sparrow v. The Queen., 2 W.W.R. 577, 592-93 (1987).

80. MacMillan Bloedel Ltd. v. Mullin, 3 W.W.R. 557, 61 B.C.L.R. 145 (1985).

81. 2 S.C.R. 335, (1984), where the Supreme Court imposed a judicially enforceable fiduciary obligation on the Crown to properly manage surrendered lands for the benefit of the Indians. Although the reasoning in Guerin could be limited to recognized reservation lands after surrender, the Court did trace the roots of the fiduciary obligation to aboriginal title. Id. at 376.

82. Section 88 of the Indian Act, R.S.C. 1970 S.I-6, makes provincial laws of general application applicable to Indians, provided they do not infringe treaty or federal statutory rights. Regulation under the British Columbia Wildlife Act has been frequently upheld by the Canadian Supreme Court. Kruger and Manuel v. The Queen, 1 S.C.R. 104 (1978) (Wildlife Act regulates only time, manner, and place of hunting; it does not take hunting rights); Dick v. The Queen, 2 S.C.R. 309 (1985) (Wildlife Act is

over, since Canadian courts have consistently upheld Fisheries Act regulation of treaty rights,[83] it seems unsurprising that aboriginal fishing rights are also subject to federal regulation.[84] Overlooked until recently was a provision of the Indian Act authorizing tribal regulation to displace Fisheries Act regulation for the management of fish and game on Indian reserves.[85]

Prior to the enactment of the Constitution Act of 1982, any limitation on federal Fisheries Act regulation of aboriginal rights appeared unlikely. In the related hunting rights area, the Canadian Supreme Court upheld termination of treaty rights under the federal Migratory Birds Convention Act.[86] Thus, species conservation clearly prevailed over native rights, even treaty rights, where the regulation was federal.[87] However, there was some judicial indication that regulation must treat native subsistence rights distinctly from sport and commercial hunters, at least where native rights were treaty rights[88] or protected under the prairie provinces' Natural Resources Agreements.[89]

In the latter two situations it was at least arguable that both federal and provincial regulation should be aimed at conservation of game for Indian needs, and any restriction on subsistence taking limited to those necessary to accomplish this purpose.[90] No similar regulatory limits seemed applicable to aboriginal rights, as the Canadian Supreme Court frequently sustained application of both federal fishery regulations and provincial game regulations without requiring a showing that the regulations were designed to conserve fish or game for Indian needs, or that the native taking itself was a threat to the species.[91] In British Columbia the effect was to ratify increasingly stringent regulation of the Indian fishery, occasioned in large measure by the growth of non-Indian commercial and sports fisheries.[92]

In response, British Columbia tribes sought exemption from Fisheries Act regulation under the Indian Act, and the courts have affirmed displacement of inconsistent Fisheries Act regulations.[93] However, Indian Act displacement is limited to on-reserve fishing, requires the acquiescence of the Minister of Indian Affairs,[94] and may not be applicable to rivers bordering reserves.[95] Nevertheless, use of the Indian Act

---

a law of general application under § 88); Jack and Charlie v. The Queen, 2 S.C.R. 332 (1985) (Wildlife Act is not an impermissible interference with Indian's freedom of religion).

83. Regina v. Cooper, 1 D.L.R. (3d) 113 (B.C.S.C. 1969) (upholding convictions of 3 treaty Indians for violating federal Fisheries Act regulations). The Canadian Supreme Court has upheld the termination of hunting rights under the federal Migratory Birds Convention Act, R.S.C. 1970 ch. M-12. Regina v. Sikyea, 1964 S.C.R. 642; Regina v. George, 1966 S.C.R. 267 (treaties do not prevail over federal legislation); Daniels v. The Queen, 2 D.L.R. (3d) 1 (1969) (natural resource agreements do not prevail over federal legislation).

84. Regina v. Derrikson, 71 D.L.R. (3d) 159 (1976); Jack v. The Queen, 1 S.C.R. 294 (1980) (Terms of Union, under which British Columbia joined the Confederation, promising "a policy as liberal as that hitherto pursued by the British Columbia Government shall be continued by the Dominion after the Union," do not preclude subsequent Fisheries Act regulation).

85. Section 81(1) of the Indian Act, R.S.C. 1970 s.I-6, authorizes tribal by-laws for "the preservation, protection, and management of fur-bearing animals, fish and other game on the reserve." Under section 82, these by-laws are subject to disapproval by the Minister of Indian Affairs.

86. See cases cited, above note 83.

87. The result is consistent with the language in many of the treaties of western Canada which expressly subject native hunting and fishing rights to regulation by the "Government of the country." See, e.g., Treaty No. 8, cited in P. Cumming & N. Mickenberg, above note 66, at 221. The prairie provinces' Natural Resource Agreements contain similar language, see id. at 211.

88. Regina v. Sikyea, 43 D.L.R. (2d) 150, 153 (1964), 46 W.W.R. 65, 68 (N.W.T.C.A.), aff'd, S.C.R. 642 (1964) (permissible regulations were those designed to assure a supply of game for Indian needs).

89. Prince and Myron v. The Queen, 1964 S.C.R. 81, 84 (1964) (distinguishing between subsistence hunting and sport and commercial hunting, exempting the former from general game laws). See also Rex v. Wesley, 4 D.L.R. 774 (Alta. App. Div. 1932).

90. See Lysyk, Indian Hunting Rights: Constitutional Consideration and the Role of Indian Treaties in British Columbia, 2 U.B.C. L. Rev. 401, 414 (1964-66).

91. See cases cited, above note 82 (sustaining provincial game regulations) and 84 (sustaining federal Fisheries Act regulations).

92. See Jack v. The Queen, 1 S.C.R. 294, 310 (1980) (Dickson J.).

93. R. v. Jimmy, 3 C.N.L.R. 77 (B.C.C.A. 1987); R. v. Baker, 4 C.N.L.R. 73 (B.C. Co. Ct. 1983). See also R. v. Burnaby, 2 C.N.L.R. 125 (N.B.Q.B. 1987); R. v. Sacobie and Polchies, 3 C.N.L.R. 92 (N.B.Q.B. 1987).

94. See above note 85 and accompanying text.

95. Attorney General of British Columbia v. Wale, 2 C.N.L.R. 36 (B.C.C.A. 1987) (affirming a preliminary injunction pending trial on this issue). But see the dissenting opinion of Judge Seaton, id. at 44 (citing Alaska Pacific Fisheries v. U.S., 248 U.S. 78 (1918), where the Annette Island Reserve was held to include surrounding waters); and Jack v. The Queen, 1 S.C.R. 294 (1980), where Justice Dickson noted the difficulty of separating reserves from traditional fisheries and ruling that the purpose of the reserves was often to permit the Indians to continue to fish at their customary stations); Peter v. R. in Right of British Columbia, 42 B.C.L.R. 373 (B.C.S.C. 1983) (refusing

in this manner may enable British Columbia tribes to achieve a co-management role similar to that possible for U.S. tribes.[96]

C. The Constitution Act of 1982 and the Sparrow Decision

The 1982 Constitution Act, which patriated the Canadian Constitution,[97] included section 35(1) recognizing and affirming "existing aboriginal and treaty rights."[98] What is meant by "existing" rights is open to question -- in particular, it is not clear whether this saves all restrictions imposed on aboriginal and treaty rights as of 1982.[99] Section 37 established a constitutional conference to, among other things, settle questions such as this, but no progress has been made and the issue seems destined to be resolved judicially.[100]

The first case to apply section 35(1) to the federal Fisheries Act was Sparrow v. The Queen.[101] In Sparrow, a unanimous British Columbia Court of Appeal reversed the conviction of a Musqueam Band member who was fishing off-reservation on the Fraser River with a drift net longer than permitted under Fisheries Act regulations. In so doing, the court not only recognized aboriginal fishing rights but limited the federal power to regulate the Indian fishery for the first time.

The Court of Appeal first reversed the lower courts' interpretation of Calder, ruling that aboriginal title in British Columbia may arise at common law.[102] It was unnecessary for the court to confront the issue of whether aboriginal fishing rights had been extinguished because the Fisheries Act regulations always recognized a native right to fish for food and authorized separate licenses for it.[103] The court dismissed the federal government's suggestion that because the right was subject to regulation, it did not constitute an "existing" aboriginal right, ruling that the regulations confirm the existence of this right, rather than extinguish it.[104]

As to the regulatory limits imposed by section 35(1) the Court of Appeal construed the provision "in a liberal and remedial way," expressly endorsing the U.S. view that treaties and statutes relating to Indians should be liberally construed and doubtful expressions resolved in their favor,[105] a rule that now seems settled Canadian jurisprudence.[106] However, the

---

to strike a position seeking a declaration that a license to the foreshore adjacent an Indian reserve was ultra vires).

96. See Settler v. Lameer, 507 F.2d 231 (9th Cir. 1974) (upholding tribal regulation at off-reservation customary fishing stations).

97. See generally Hodge, Patriation of the Canadian Constitution: Comparative Federalism in a New Context, 60 Wash. L. Rev. 585 (1985).

98. Constitution Act § 35(1) (1982).

99. Compare McNeil, The Constitutional Rights of Aboriginal Peoples of Canada, 4 Sup. Ct. L. Rev. 255 (1982) (arguing that § 35(1) should be construed to restrict all regulation of aboriginal and treaty rights not lawfully extinguished in 1982), with P. Hogg, Canada Act 1982, Annotated, at 82-83 (1982) (endorsing as "plausible" a freezing of native rights in their condition as of 1982).

100. See, e.g., Regina v. Arcand, 4 C.N.L.R. 91 (A.P.C. 1988) (Migratory Birds Convention Act was a continuing breach on treaty hunting rights, not an extinguishment of those rights and thus the right is "existing" and is affirmed by section 35(1)); Regina v. Sundown, 4 C.N.L.R. 116 (S.C.Q.B. 1988) (section 35(1) must be read subject to the Natural Resources Transfer Agreement and has no effect on the application of provincial game laws); Regina v. Googoo, 2 C.N.L.R. 137 (N.S.P.C. 1987) (section 35(1) did not revive treaty rights that had previously been prohibited by provincial fishing regulations); see generally, Pentney, The Rights of the Aboriginal Peoples of Canada in the Constitution Act, 1982, Part II, Section 35: The Substantive Guarantee, 22 U.B.C. L. Rev. 207, 215-20 (1988).

101. 2 W.W.R. 577 (B.C.C.A. 1987).

102. Id. at 592-95 (reversing B.C.W.L.D. 599 (1986)). If affirmed by the Canadian Supreme Court, this result would have considerable effect on the numerous pending aboriginal land claims in the province, although the court was careful to emphasize that aboriginal claims are fact-specific. Id. at 595 (relying on Dickson J. in Kruger and Manuel v. The Queen, 1 S.C.R. 104, 108-09 (1978)). For a summary of one aboriginal land claim, see The Address of the Gitksan and Wet'suwet'en Hereditary Chiefs to Chief Justice McEachern of the Supreme Court of British Columbia, 1 C.N.L.R. 17 (1988).

103. 2 W.W.R. at 596-97.

104. Id. at 597:

> If the Indians did not have a special right in respect of the fishery, there would have been no reason to mention them in the regulations. The regulations themselves which have consistently recognized the Indian right to fish, are strong evidence that the right does exist. It is equally clear that such right has not been extinguished, either expressly (as Hall J. would require) or by implication (as Judson J. held).

105. Id. at 599 (citing Justice Dickson's opinion in Nowegijick v. The Queen, 1 S.C.R. 29, 36 (1983), which in turn relied on Jones v. Meehan, 175 U.S. 1 (1899) (Indian treaties "must ... be construed, not according to the technical meaning of [their] words ... but in the sense in which they would naturally be understood by the Indians").

106. Simon v. The Queen, 2 S.C.R. 387, 402 (1985); see R. Bartlett, above note 67, at 31 (noting that the rule of liberal construction constitutes a "significant departure from conventional principles of interpretation and is founded on the unique historical relationship between the Crown and the Indians").

court rejected as inconsistent with existing circumstances the Indians' argument that their fishing should be exempt from federal regulation.[107] Also rejected was the contention that the federal government be required to prove by clear and convincing evidence any restriction on the Indian fishery as reasonably necessary for conservation.[108] Instead, the court ruled that the government must treat the Indians separately, giving "priority" to Indian food fishing over the commercial and sports fisheries,[109] but reserving the right to impose "reasonable regulations to ensure proper management and conservation of the resource."[110]

Although the court seemed to think its ruling would simply constitutionally entrench existing government policy,[111] it is doubtful that the inland Indian fishery was in fact preferred over the competing ocean commercial and sports salmon fisheries.[112] Thus, the ruling could produce larger changes than the court assumed. Moreover, the rule of liberal construction led the court to expand the scope of the Indian food fishery beyond the band's reasonable subsistence needs to include other societal needs, such as ceremonial use "and a broader use of fish then mere day-to-day domestic consumption."[113]

The Sparrow case, now on appeal to the Canadian Supreme Court, could prompt an entire restructuring of salmon fishery regulation in British Columbia. However, its precise contours will not emerge for some time, as the decision left unresolved even the question of whether the net length restriction at issue was a reasonable conservation measure.[114] Also unresolved is how the priority owed the Indian fishery is to be fulfilled. The American experience suggests that if this does not include some quantification of the right, the authority to promulgate "reasonable regulations to ensure the proper management and conservation of the resource" may prove to be so vague a standard as to legitimize measures designed to "conserve" fish for the commercial and sports fishing.[115] Similarly, the court's asserted distinction between the fishing right and the time, place and manner of exercising the right is one that failed to impose meaningful restrictions on state regulators in the U.S., necessitating frequent resort to the courts.[116] The Sparrow court's directive to accord priority to the Indian fishery may in fact avoid these difficulties, but some quantification of the scope of the right seems necessary.

A final issue concerns the apparent exclusion of a commercial dimension from the scope of the right. The U.S. treaty rights include a commercial dimension because the tribes were commercial fishers at the time the treaties were signed. If the Musqueam Band were commercial fishers like many other tribes in British Columbia,[117] their aboriginal right should also include a commercial dimension.[118] Alternatively, if Fisheries Act regulation extinguished this aspect of the Indian right prior to 1982, perhaps compensation is due. A recent Manitoba decision expressly adopting the Sparrow court's reasoning arguably supports the former position, holding that the Migratory Birds Convention Act can regulate but no longer extinguish treaty hunting rights.[119] It may be that Indian food fish licenses can similarly regulate but no longer exclude commercial fishing based on aboriginal rights. The commercial fishery issue has been squarely raised by the Gitksan Bands in their attempt to secure management authority for the Skeena River System.[120] An answer must await trial on the issue.

D. An Emerging Environmental Right

The outline of an environmental right began to emerge even before the Court of Appeal's decision in Sparrow. On August 15, 1985, in Pasco v. Canadian National Railway Co., a British Columbia trial court issued an interim injunction against the railroad's twin tracking construction program in response to a suit brought by the Oregon Jack Creek Band alleging

117. See Jack v. The Queen, 1 S.C.R. 294, 306-11 (1980) (citing testimony of noted anthropologist Barbara Lane); Attorney General of British Columbia v. Wale, 2 C.N.L.R. 36, 39 (B.C.C.A. 1987) (citing a fish management report prepared for the Gitksan-Wet'suwet'en Tribal Council).

118. This is the U.S. rule, see above note 24.

119. Regina v. Flett, 3 C.N.L.R. 70 (M.P.C. 1987), overturning 20 years of Canadian precedent, including the cases cited in above note 83, on the basis that under the new Constitution, Parliament is no longer supreme, and courts must protect constitutionally entrenched rights from statutory restrictions. Id. at 75.

120. Attorney General of British Columbia v. Wale, 2 C.N.L.R. 36 (B.C.C.A. 1987) (affirming a preliminary injunction preventing the bands' exclusive commercial fishing, established under § 81 of the Indian Act, above note 85, pending trial).

interference with their fishing rights.[121] While the band alleged interference with aboriginal rights, it also claimed the construction program would interfere with its proprietary rights in the Thompson River, arising from its riparian rights accompanying its beneficial ownership of a land reserve adjoining the river and from the appropriation of specific traditional fishing grounds for the band under the British Columbia Terms of Union. It was these alleged proprietary rights, rather than the aboriginal title claim that led Judge McDonald to issue an interim injunction so that a trial could be held on the issue of whether these rights existed and, if so, whether the double tracking constituted a trespass.[122] The injunction was affirmed by the Court of Appeal, and the Canadian Supreme Court dismissed a subsequent appeal.[123]

The Sparrow case should cause Judge McDonald to reconsider his doubts about the viability of the band's claim based on aboriginal title. If aboriginal title can be proved, it is no less capable of maintaining a trespass than other proprietary rights.[124] U.S. courts have long considered aboriginal title "as sacred as the fee," differing from a fee interest only in its inalienability and compensation rules.[125] The Canadian Supreme Court in Guerin v. The Queen seemed to agree that the right was similar to fee title.[126]

Affirmation that the native right to fish may restrain habitat-damaging activities came in the recent Claxton v. Saanichton Marina case.[127] There, a British Columbia trial court issued an injunction halting construction of a marina in waters on which a Vancouver Island Indian band held a treaty right to "carry out their fisheries as formerly." Employing the rule of liberal construction, the court specifically rejected suggestions that this promise secured to the band only a right to fish along with others, and that its fishing right could be diminished to the extent the marina occupied some of its traditional fishing grounds. Judge Meredith declared that the "right of the Band is to insist that the whole of the Bay continue to be used as a fishery."[128] Although Claxton involved a treaty right unusual in British Columbia, one prominent authority believes it will be the first of many upholding native rights to use water for fishing, as well as hunting and trapping rights.[129] This prediction seems sound, at least in the case of treaty rights, since the Canadian Supreme Court has already declared that a treaty hunting right constitutes "a positive source of protection against infringement on hunting rights."[130]

E. Treaty Rights vs. Aboriginal Rights

The British Columbia situation is complicated by the fact that native fishing rights may be grounded on treaty, land reserve, fishing ground "appropriation," or aboriginal claim.[131] It is possible that the validity and scope of the right might vary depending on its origin. However, while some differences seem plausible, especially regarding the circumstances under which aboriginal claims may be extinguished[132] and the possible tribal management authority over on-reservation fisheries,[133] in most respects the origin of the native fishing right should not affect its existence or nature.

In the U.S. the courts have discounted most distinctions by which native title is held, the chief difference being the no compensation rule for extinguishment of aboriginal title.[134] Even that distinction may not apply in Canada,[135] and section 35(1) now makes extinguishment of "existing" aboriginal rights without consent constitutionally impermissible. Claxton was a treaty-based right,[136] and the result there parallels the U.S. experience by not only finding a right of environmental protection implied in the treaty but also construing the right to survive a subsequent conveyance of the lands in fee.[137] This durability surely applies to

"recognized" native rights -- by treaty, reserve, or fishing appropriation.[138] Whether aboriginal title survives fee grants from the Crown to third parties may be open to question.[139] In the case of fishing rights, however, it may be much more difficult to demonstrate that fee ownership of submerged lands is sufficiently inconsistent with native fishing to constitute the "clear and plain" intention necessary to extinguish aboriginal title.[140]

The issue of partial extinguishment will arise in claims for commercial fisheries. Sparrow did not directly confront the issue, although the Court recognized a native right in excess of that recognized by the tribe's food fish license.[141] The commercial fishery question is squarely at issue in the Wale case.[142] However, U.S. precedent,[143] the dissenting opinion of Judge Seaton in Wale,[144] and the implications flowing from Regina v. Flett[145] all suggest that native fishing rights may include a commercial dimension. But it seems quite clear from Sparrow that, even if it does, the right will be subject to conservation regulations.[146] However, under the Indian Act, conservation regulations governing fisheries on reserves may be tribal regulations.[147]

Fisheries on reserves may present a particularly troublesome issue because of their arguably exclusive nature. While certainly tribes ought to be able to regulate access to the fisheries on reserves,[148] in the case of a migratory resource like salmon, exclusivity cannot mean unlimited harvests, for that would undermine the principle of the paramount importance of conservation.[149] In the U.S. the Supreme Court refused to distinguish between on-reservation and off-reservation fisheries in determining that the treaties' "in common with" language implied a 50% share of the resource.[150]

Absent similar language in the British Columbia treaties or reserves, the equal sharing principle may not be appropriate. But if the right includes a commercial dimension, some sort of allocation will be necessary to properly manage the resource. If it can be estimated, the fairest way to establish such an allocation may be to base it on per capita consumption at the time of colonial settlement, irrespective of whether the right was grounded on treaty, reserve, or aboriginal claim. In the case of the Musqueam Band, evidence in the Sparrow case suggested that such a result would require nearly doubling the band's 1982 harvest.[151] That, in fact, may not be an impractical goal in light of the emerging environmental protection component of the right and restoration initiatives promised by the Pacific Salmon Treaty.[152] In the U.S. it is public policy to double the size of the Columbia Basin salmon runs, largely (although not exclusively) for the benefit of the inland Indian fishery.[153] Perhaps judicial declaration that the scope of the native fishing right is a function of per capita pre-colonial harvests would induce a similar restoration program for salmon runs in British Columbia.

F. The Aboriginal Right as a Negotiating Tool

As in the case of the U.S. Indians,[154] judicial recognition of Canadian native rights can prompt negotiations producing settlements recognizing both native land and resource rights and environmental rights to protect the habitat upon which the resources depend. Until a series of agreements signed in mid-1988, there were two prominent examples: The Inuvialuit (COPE)[155] Agreement covering the Western Arctic and the James Bay Agreement.

151. The 58,000 pounds harvested in 1982 meant a per capita harvest of just under 400 pounds. The Pearce Report, above note 112, at 174, estimated pre-colonial consumption at around 700 pounds per capita.
152. Treaty between the U.S. and Canada concerning Pacific Salmon (entered into force Mar. 18, 1985), discussed in Jensen, Yanagida, and Twitchell, above note 52.
153. The goal of Columbia River Basin Fish and Wildlife Program, adopted under the Northwest Power Act, 16 U.S.C. § 839, is to double salmon runs in the Basin in 20 years. See generally Blumm, Reexamining the Parity Promise: More Challenges than Successes to the Implementation of the Columbia Basin Fish and Wildlife Program, 16 Envtl. L. 461 (1986).
154. See above notes 48-58 and accompanying text.
155. The agreement, entitled "the Western Arctic Claim: Inuvialuit Final Agreement," was negotiated by the Committee for Original Peoples' Entitlement, hence the acronym of "COPE."

The James Bay Agreement, prompted by the trial court decision in the Kanatewat case,[156] supplies the Cree and Inuit with a guaranteed allocation of wildlife, environmental protection provisions, native regulatory authority over wildlife management, and even a guaranteed income security program for native hunters, trappers and fishers.[157] The COPE Agreement, commits the federal government not only to substantial recognition of fee title for the natives, but also to dedicate a 5,000-square-mile area of the northern Yukon as a National Wilderness Park in which the Inuvialuit people retain hunting, fishing, and trapping rights.[158] The Agreement also provides the Inuvialuit with a system of preferential and exclusive harvesting rights and promises protection of "critical" wildlife in an integrated wildlife and land management program, involving the Inuvialuit "in all structures, functions, and decisions pertaining to wildlife management ..."[159]

In the 1988 settlements, the Canadian government agreed (1) to pay the Cree $11.2 million to settle a longstanding dispute over an alleged breach of the James Bay accord; (2) to cede title to Indians in the Yukon Territory nearly 16,000 square miles and $194 million; and (3) to convey some 70,000 square miles in the McKenzie River Valley in the Northwest Territories and $400 million to Dene and Metis tribes.[160] If a proposed transfer of 200,000 square miles and $520 million in the eastern Arctic is approved, the natives will have full or partial control of nearly 7% of the land mass in Canada.[161] While these agreements indicate that natives may be able to bargain for significant environmental protection for subsistence resources, it is clear that judicial declaration of the existence of their rights is a prerequisite to effective bargaining. Without the impetus supplied by such a declaration, governments are unlikely to be interested in negotiating agreements that recognize native rights to resources or supply environmental protection for them. The evolution of native fishing rights in New Zealand mirrors the North American pattern of judicial decisions prompting legislative and executive recognition.

III. New Zealand

Like the natives of British Columbia and the U.S. Pacific Northwest, the Maori peoples of New Zealand historically were heavily dependent on fishing for both their subsistence and their economy.[162] The English version of the 1840 Treaty of Waitangi included a clause which purported to guarantee the natives "full, exclusive, and undisturbed possession" of their lands, fisheries, forests, and other properties.[163] Although this promise proved to be judicially unenforceable, the Maori have succeeded in securing legislation recognizing their land claims to a much greater extent than the North American Indians.[164] This may be due to their comparatively greater numbers, their representation in Parliament, New Zealand's unitary governmental structure (without states or provinces), or the fact that prior to colonization, some Maori tribes had established agrarian societies, the validity of which Europeans were

162. See, e.g., the 1870 Kauwaeranga judgment of the Native Land Court, reprinted at V.U.W.L.R. 227, 240 (1984) (access to tidelands for fishing

> afforded at all times, and with little labour and preparation, a large and constant supply of almost the only animal food which [the Maori] could obtain, was of the highest value to them; indeed of very much greater value and importance to their existence than any equal portion of land on terra firma.)

See also Waitangi Tribunal, Muriwhenua Fishing Report (WAI:22) 31-76 (1988) [hereinafter Muriwhenua Report, available from Government Print, Wellington, New Zealand] (detailed account of Maori dependence on fishing during the period prior to 1840, concluding that in 1840 Maori had a "bounteous" commercial fishery "which seemed to be under no immediate threat and they could afford to allow the few local settlers in their midst access to that fishery..." (at 62)).

163. There are two version of the treaty: an English text and a Maori text, and they are not literal translations of each other. The English version of the treaty, reprinted at 11 V.U.W.L.R. 40 (1981), was signed by 39 Maori chiefs, while over 500 signed the Maori version. Sutton, The Treaty of Waitangi Today, 11 V.U.W.L.R. 17, 21 (1981). The Maori text neither mentioned "exclusive rights" nor fisheries. But it did promise the Maori "full chieftainship (or full authority) over the lands and all things highly important to them. See Muriwhenua Report, above note 162, at 173-74. For a careful comparison of the Maori and English texts, see id. at 173-95; see also C. Orange, The Treaty of Waitangi (1987).

164. See Tamihanee Korokai v. Solicitor-General, 32 N.Z.L.R. 321, 355 (1913) ("From the earliest period of our history the rights of natives have been conserved by numerous legislative enactments ... culminating in the Native Land Act of 1909").

more ready to accept.[165] But while New Zealand established a system for recognizing Maori title to land, until very recently no accommodation was made for Maori fishing rights. Judicial decisions in 1986 and 1987 dramatically altered this state of affairs, however,[166] and it now appears that the Maori possess substantial, if as yet uncharted, rights to harvest fish, as well as restrain activities harmful to their fisheries.

A. The Treaty of Waitangi

On February 6, 1840, 52 Maori chiefs, mostly from the North Island, signed the Treaty of Waitangi.[167] The preamble to the treaty indicates its purpose was "to protect the just rights and property" of the Maori and secure peace and good order for them in the face of rapid emigration of Europeans and "avert the consequences that might result from an absence of Law."[168] Unlike the North American treaties, however, Waitangi transferred no native land. In fact, while in Article I of the English version of the treaty the Maori chiefs purported to cede sovereignty to the Crown, Article II was designed to protect, not take, Maori proprietary rights, assuring them "the full, exclusive, and undisturbed possession of their Lands and Estates, Forests, Fisheries and other properties so long as it is their wish and desire to retain the same in their possession...."[169] The chiefs also granted the Crown the exclusive right of purchasing Maori land, and in Article III the Maori were declared British citizens and promised royal protection.

The Treaty of Waitangi has been controversial, considered by some to be a legally binding international agreement, by others to be a sham.[170] The Maori have always felt that the treaty promised them more than mere possession of their lands and resources; they believed it gave them management authority (rangatiratanga) as well.[171] However, while the Pakeha (whites) frequently acknowledged the moral obligations imposed by the treaty,[172] the courts treated it as a legal nullity on the theory that the Maori's lack of political organization made them incompetent to act as a sovereign body under international law.[173] Thus, the reasoning went, the treaty did not constitute a cession of sovereignty -- New Zealand was not a "ceded" colony, but a "settled" one. This convenient legal fiction meant that English common law, under which all land titles had to come through Crown grant, would govern New Zealand from the assertion of sovereignty.[174] Moreover, the courts also ruled that the treaty was not self-executing in any event; in order for its promises to be judicially enforceable, they had to be enacted by Parliament.[175] By itself, then, the treaty amounted to a statement of moral or political principle, not an independent source of legal rights.

B. Common Law Native Title

165. See Sanders, New Zealand and Australia -- A Different View, 6:4 Am. Ind. J. 27 (1980). Since the Maori Representation Act of 1867, the Maori have had 4 seats in Parliament. Id. at 29.

166. See below notes 223-40, 249-55, 262-67 and accompanying text.

167. Copies of the treaty were later delivered to Maori tribes throughout the country and it was ultimately signed by 512 Maori chiefs.

168. Treaty of Waitangi, above note 163, art. II. The Maori version of the treaty (above note 163) spoke of reserving their "tino rangatiratanga," their full chiefship or kingdom. See below note 171.

169. The quoted language is from the English version of the treaty. On the differences between the English and Maori versions of the text, see above note 163. In essence, Article I of the treaty granted to the Crown sovereignty (English version) or governance (Maori version), while Article II reserved to the Maori "exclusive possession" (English version) or "full chieftainship" (Maori version). The translations seem to have emphasized the English version of Article I ("sovereignty") and the Maori version of Article II ("full chieftainship"). Arguably, the Maori would have done better had the emphasis been on Article I of the Maori version (granting "governance" to the Crown) and Article II of the English version (securing to the Maori "exclusive possession" of lands, forests, and fisheries).

170. See Haughey, The Treaty of Waitangi -- Its Legal Status, N.Z.L.J. 392 (1984).

171. See, e.g., Muriwhenua Report, above note 162, at 181 ("te tino rangatiratanga" means "exclusive control ... for the benefit of the tribe including those living and those yet to be born"; there are 3 major elements of this concept: (1) authority to control the tribal resource base; (2) recognition of the spiritual source of the resource (such as fisheries); and (3) authority over both persons and property).

172. See, e.g., Mueller v. The Taupiri Coal Mines Ltd., 20 N.Z.L.R. at 123 (1902); Baldick v. Jackson, 27 N.Z.L.R. at 644 (1910); Tamihance Korokai v. Solicitor-General, 32 N.Z.L.R. 321, 343 (1912); Re Bed of Wanganui River, N.Z.L.R. 600, 632 (1962); see also New Zealand Law Comm'n, The Treaty of Waitangi and Maori Fisheries, 34 (Draft, 1988) (citing assurances of Lord Stanley in 1844).

173. See, e.g., Wi Parata v. Bishop of Wellington, 3 Jur. (N.S.) 72, 78 (1877); see generally Molloy, The Non-Treaty of Waitangi, N.Z.L.J. 193 (1971).

174. Veale v. Brown, 1 N.Z.C.A. 152 (1868). On the distinction between "settled" and "ceded" colonies, see K. Roberts-Wray, Commonwealth and Colonial Law 542-43 (1966) (arguing against rigid distinction between the two concepts); Cooper v. Stuart, 15 A.C. 286, 291 (1899) (noting that the extent to which English law applies in a colony "must necessarily vary with the circumstances"; in "settled" colonies English law prevails "in so far as it is reasonably applicable to the circumstances of the colony ...").

175. Hoani Te Heuheu Tukino v. Aotea District Maori Land Board, N.Z.L.R. 590, A.C. 308 (1941).

If the Waitangi Treaty gave the Maori no enforceable rights, the common law could still protect their prior possession under the doctrine of discovery, first enunciated by U.S. Chief Justice John Marshall[176] and subsequently applied by Mr. Justice Chapman in R. v. Symonds.[177] Discovery gave title to the discoverer as against other European nations, but did not oust native possessory rights, although it did give the "sole right of acquiring the soil from the natives."[178] Thus, according to Symonds, the common law recognized Maori possession and gave to the government the preemptive right to extinguish native title.[179] In effect, the unenforceable principles of the Treaty of Waitangi were simply recognition of property rules enforceable at common law.[180] The Symonds result was reinforced by the Court of Appeal in 1872 in Re Lundon and Whitaker Claims Act, 1871.[181]

However, after 1872 the New Zealand courts lost their way. Perhaps confused by the distinction between the Crown's ultimate title and the Maori right of possession, or by the fact that the Treaty of Waitangi (but not the common law) conferred no enforceable rights, the courts ruled that they had no authority to declare aboriginal title in New Zealand. In Wi Parata v. The Bishop of Wellington,[182] Chief Justice Pendergast, misconstruing both Symonds and the American authorities, concluded that while the government "must acquit itself, as best it can, of its obligation to respect native proprietary rights," it was "the sole arbiter of its own justice."[183] This began a long line of cases ruling that the only land title recognizable in court was one grounded on a patent from the Crown,[184] led to a celebrated conflict with the Privy Council over recognition of native title,[185] and finally induced Sir John Salmond to draft the Native Land Act of 1909 aimed at settling the issue.[186] The 1909 Act recodified Maori land legislation, which since 1862 authorized Maori Land Courts to transform customary title into Crown-recognized fee title.[187] It was more than merely a recodification, however, as it enabled the Crown to extinguish aboriginal title by proclamation, rather than by legislation, and expressly made Maori customary title unenforceable against the Crown.[188] After 1909, it seemed settled that any Maori rights depended on statutory recognition.[189]

C. Maori Fishing Rights: The Traditional View

The New Zealand judiciary's twin rules that (1) the Treaty of Waitangi conferred no enforceable rights, and (2) all title had to be Crown-derived, did not serve to dispossess the Maori from their lands, since legislation recognizing Maori land rights was enacted -- arguably beginning in 1841.[190] Fishing rights, however, were

176. Johnson v. M'Intosh, 21 U.S. (8 Wheat.) 543 (1823).

177. N.Z.P.C.C. 387 (N.Z.S.C.) (1847).

178. Johnson, above note 176, at 573. See generally Cohen, Original Indian Title, 32 Minn. L. Rev. 28 (1947).

179. Symonds, above note 177, at 390 (native title "cannot be extinguished (at least in times of peace) otherwise than by the free consent of the native occupiers").

180. Id. ("the Treaty of Waitangi ... does not assert either in doctrine or in practice anything new and unsettled"). Paul McHugh notes that recognition of native title was consistent with the rule presuming continuity of local property rights, a principle preserved uncommon law rules after the Roman and Norman conquests. McHugh, Aboriginal Title in New Zealand Courts, 2 Cant. L. Rev. 235, 241 (1984).

181. N.Z.L.R. 42, 49 (1872) ("the Crown is bound, both by the common law of England and by its own solemn engagements, to a full recognition of native proprietary rights").

182. 3 N.Z. Jur. (N.S.) S.C. 72 (1877).

183. Id. at 78. The court also ruled that the Treaty of Waitangi did not affect the legal status of native possession, since its attempt to cede sovereignty was a "simple nullity" as there was no "body politic ... capable of making cession of sovereignty." Id. The harsh result in Wi Parata, including judicial references to the Maori as "savages" and "primitive barbarians" may be explainable by the fact that, unlike Symonds, the Crown was not a party to the litigation.

184. See, e.g., Hohepa Wi Neera v. The Bishop of Wellington, 21 N.Z.L.R. 655 (C.A.) (1902).

185. See Nireaka Tamaki v. Baker, N.Z.P.C.C. 371 (1902) (overruling 12 N.Z.L.R. 483 (1894); Wallis v. Solicitor General, A.C. 173 (1903); Hookey, Milirrpum and the Maoris: the Significance of the Maori Land Cases Outside New Zealand, Otago L. Rev. 63 (1972).

186. See generally McHugh, above note 180, at 245-50.

187. In 1862, a year after Britain relinquished control over native affairs, the Maori Land Court was established in 1862 to ascertain customary Maori landowners, transform customary title into fee title and authorize the sale of land by Maori to Pakeha. See Haughey, Maori Claims to Lakes, River, Birds and the Foreshore, 2 N.Z.L.R. 29 (1966). The result was the rapid sale of Maori land. See Sanders, above note 165, at 28; K. Sinclair, A History of New Zealand 146-47 (3d ed. 1980) ("The land laws, which Parliament passed by the score, became a legal jungle in which the Maori lost themselves and were preyed upon by its natural denizens, the land speculators or their agents and shyster lawyers").

188. See McHugh, above note 180, at 250 (discussing § 84 of the Native Land Act of 1909, now § 155 of the Maori Affairs Act of 1953).

189. See Tamihana Korokai v. The Solicitor General, 32 N.Z.L.R. 321 (1912). But cf. Manu Kapua v. Para Haimonu, N.Z.P.C.C. 413, A.C. 761 (1913), where the Privy Council, without relying on any statute, stated that prior to Crown grant land was vested in the Crown "subject to the burden of Native customary title to occupancy."

190. The Land Claims Ordinance of 1841 seemed to recognize native title, stipulating that "unappropriated lands, subject to rightful

another matter. Legislative recognition, while not necessarily absent, was considerably more ambiguous.

Section 8 of the 1877 Fish Protection Act,[191] the first general regulation of fisheries, expressly disclaimed any intent to affect fishing rights secured to aboriginal natives by the Treaty of Waitangi. This provision was deleted without explanation in 1894, but another disclaimer was enacted in Section 14 of the Fisheries Amendment Act of 1903 which, while omitting any reference to the treaty, provided: "nothing in ... this Act shall affect any existing Maori fishing rights."[192] The same language was reenacted as Section 77(2) of the Fisheries Act of 1908.[193] In 1983, section 77(2) was recodified as section 88(2), with the word "existing" deleted.[194] While these provisions certainly did not extinguish Maori rights, the nature of the rights they preserved was unclear. The 1877 legislation might have been interpreted to implement the treaty's promise of exclusive fisheries, but it was deleted before it ever came before a court. The 1908 statute was interpreted merely to save existing rights, not grant new ones.[195]

The first judicial interpretation of Maori fishing rights antedated any of the statutes, however. In the Kauwaeranga judgment of 1870 Chief Judge Fenton of the Maori Land Court affirmed exclusive Maori rights to fish on tidelands on the Waihou River. Unlike later decisions, Kauwaeranga assumed the Treaty of Waitangi, as complemented by land ordinances beginning in 1841, effectively confirmed native fishing rights. Although the judgment refused to vest absolute title to the foreshore in the natives, it construed the fishery promise in the treaty to guarantee an easement sufficient to enable the claimants to carry out their customary fishing practices.[196] Unfortunately, Kauwaeranga was unaccountably omitted from a compilation of Maori Land Court decisions,[197] undermining its value for subsequent cases.[198] Although the Treaty of Waitangi received another favorable interpretation in 1911 in Baldick v. Jackson,[199] where Chief Justice Stout held inapplicable to the circumstances of New Zealand a statute that would have conflicted with Maori whaling guaranteed by the treaty, the same judge would soon rule that any Maori fishing rights had to be statutorily derived.

Passage of the 1909 Maori Affairs Act, which authorized the Maori Land Courts to issue freehold orders for land but did not mention waters or fisheries, was construed in Waipapakura v. Hampton to contain no legislative recognition of Maori fisheries.[200] Moreover, the decision invoked the Wi Parata rule that the treaty gave no enforceable rights.[201] Further, Chief Justice Stout concluded that under the common law "there cannot be fisheries reserved for individuals in tidal waters or in the sea near the coast,"[202] apparently forgetting his Baldick decision only 3 years before.[203] Thus, Maori fishing was subject to Fisheries Act regulation, despite the disclaimer in section 77(2), a result affirmed in 1956 and again in 1965.[204]

Other decisions interpreted the effect of the freehold orders issued by the Maori Land Courts to effectively terminate native fishing rights. Claims to the title of navigable riverbeds and tidelands were rejected on the basis of common law presumptions and statutory interpretation.[205] Thus, issuance of a freehold order

---

and necessary occupation and use by the aboriginal inhabitants, are and remain Crown or domain lands." The Royal Charter of 1840 also impliedly recognized Maori title by providing that nothing in it was to affect the rights of aboriginal natives to occupy and enjoy lands in their possession. Arguably, this included the entire country. Section 52 of the 1852 New Zealand Act gave the General Assembly authority to regulate the sale of waste lands, defined as lands where native land was extinguished by Crown presumption. And certainly the Native Land Court Acts, beginning in 1862 (above note 187), assumed the existing Maori title.

191. Regulation of oyster fisheries began with the Oyster Fisheries Act of 1866 (see below notes 206 and 246). A year later the Salmon and Trout Act of 1867 was enacted. See Muriwhenua Report, above note 162, at 81-83.

192. Fisheries Amendment Act of 1903 § 14; see generally Muriwhenua Report, above note 162, at 96.

193. Fisheries Act of 1908 § 77(2); see Keepa v. Inspector of Fisheries, N.Z.L.R. 322, 329 (1965) (history of Fisheries Act legislation).

194. Fisheries Act 1983 § 88(2).

195. Waipapakura v. Hempton, 33 N.Z.L.R. 1065, 1070 (1914); Inspector of Fisheries v. Inaia Weepu, N.Z.L.R. 920, 922 (1956); Keepa v. Inspector of Fisheries, N.Z.L.R. 322, 324 (1965).

196. Thus, the result was remarkably similar to that reached by the U.S. Supreme Court in Winans, above note 9, some 35 years later.

197. See the note by Frame, 14 V.U.W.L.R. 227 (1984).

198. Fortunately, the decision is now reprinted at 14 V.U.W.L.R. 229-45 (1984).

199. 30 N.Z.L.R. 343 (1911).

200. 33 N.Z.L.R. 1065 (1914).

201. See supra note 183 and accompanying text.

202. Waipapakura, above note 195, at 1071.

203. See supra note 199 and accompanying text.

204. See Weepu, above note 195; Keepa, above note 195. For a discussion of these cases, and Waipapakara, above note 195, see Muriwhenua Report, above note 162, at 97-99.

205. Re Bed of the Wanganui River, N.Z.L.R. 600 (C.A.) (1986) (common law presumption against including navigable riverbed in title to adjoining land); Re the Ninety Mile Beach, N.Z.L.R. 461 (C.A.) (1963) (presumption that the boundary of freehold orders is the high water mark, noting the potential conflict with § 150 of the Harbours Act, requiring grants of tidelands to be by special legislation).

to land bordering a river or the sea worked to deny fishing rights in adjacent areas.[206] The Maori lost these rights without express legislation terminating them and without compensation. They lost them by implication through judicially created rules concerning statutory interpretation and the courts' assumption that English customary law (common law) dominated over Maori customary law. In this manner Maori fishing rights were declared nonexistent by the courts; although not expressly confiscated, they seemed to have vanished by operation of law.

D. Dawn of a New Era: The Waitangi Tribunal

The revival of Maori rights must be traced to the Treaty of Waitangi Act of 1975. Dissatisfied with measures such as the Maori Affairs Amendment Act, which was designed to "normalize" Maori land tenure and permit the sale of fragmentary, uneconomic land interests, the Maori became an effective political voice in the early 1970s.[207] The principal result was the 1975 Act, which authorized a Waitangi Tribunal to investigate Maori claims that legislative or executive actions or inactions were inconsistent with the "principles" of the treaty and to publicly report its findings.[208] In effect, the tribunal sits as a sort of permanent commission of inquiry.[209] Although it may issue only recommendations and until recently lacked power to investigate past (as opposed to proposed) actions, the tribunal has had a profound impact on the evolution of Maori rights. Its reports have raised the level of public consciousness of Maori claims, and its recommendations have in fact been in large measure adopted. Moreover, increased Parliamentary sensitivity has produced a raft of legislative provisions recognizing and affirming the treaty's principles and protecting Maori rights.[210] One such provision in the State-Owned Enterprises Act led to the Court of Appeal's landmark decision in the 1987 Maori Council case, discussed below.[211]

The importance of fishing claims is evident from a brief perusal of the tribunal's docket. Its first 4 inquiries centered around the alleged prejudicial effect of fishing regulations or activities that could adversely affect fishing, such as construction of an electric power plant on Manukau Harbor near Auckland and two instances of sewage discharges.[212] Its 1983 Te Atiawa report on a proposed synthetic petroleum plant revealed a broad view of its jurisdiction and function,[213] and a 1985 amendment gave it a retrospective mandate, enabling the tribunal to consider any statutes and acts of the Crown that might be inconsistent with the treaty since its signing in 1840.[214] Although it has no ability to enforce its recommendations, the tribunal has effectively induced both legislative action and judicial decisions aimed at fulfilling the treaty's basic premise of assuring the Maori people a fundamental role in the country's economic and political life.[215]

E. The New Era in Operation: The Maori Council Case

The Waitangi Tribunal's most notable contribution to date concerns the role it played in influencing the drafting and judicial interpretation of the State-Owned Enterprises (SOE) Act of 1986, the centerpiece of New Zealand's program to reorganize its public sector. The SOE Act "corporates" certain government departments and functions, creating 9 new companies, called "state enterprises," and authorizes transfers of Crown assets, including land, to them.[216] Because of the immense scale of the land transfers the Act would authorize,[217] the Waitangi Tribunal worried that once the land ceased to be Crown land, the tribunal's ability to recommend the return of land to the Maori would be frus-

---

206. Although there was no procedure by which Maori could obtain recognition of customary fishing rights, there were a few provisions by which specific fishing grounds near Maori villages could be reserved for non-commercial purposes. However, although the Waitangi Tribunal discovered some oysteries reserved for Maori and found a number of reservations of fisheries by Maori Land Court order (see above note 187), it could uncover no fishing grounds reserved for Maori by the Marine Department under authority existing from 1900 until 1962. See Muriwhenua Report, above note 162, at 99-103.

217. Around 4 million hectares of Crown land (over 25% of the entire country) are to be transferred to Landcorp and Forestcorp alone. See New Zealand Maori Council v. Attorney General, 6 N.Z.A.R. 353 (slip op. 7-8) (1987).

trated. Consequently, it submitted an interim report in December 1986, requesting the bill be amended to protect its ability to make recommendations of land restoration.[218] Parliament responded by including two provisions in the Act, sections 9 and 27, to protect Maori interests. The Court of appeal was asked to interpret the meaning of these provisions in New Zealand Maori Council v. Attorney General.[219]

Section 27 of the Act establishes an elaborate procedure concerning both pending and future Waitangi Tribunal claims, while section 9 is a general stipulation that "nothing in this act shall permit the Crown to act in a manner that is inconsistent with the principles of the Treaty of Waitangi."[220] The problem was that the section 27 procedures did not address lands for which a Maori claim was filed after passage of the Act that had been conveyed by a state enterprise to a private party.[221] This was no small matter, since of the 88 claims pending before the tribunal in April 1987, 32 had been filed after passage of the SOE Act.[222] Consequently, the Maori Council filed suit, claiming that despite this oversight, the general proscription in section 9 forbade any land transfers that might prejudice Maori land claims.

On one level, the Court of Appeal's June 29, 1987 decision was one of simple statutory interpretation. It ruled that section 9, in fact, supplied protection to land transfers, and that the section 27 procedures were not "a complete code."[223] As a result, it ordered the Crown to a system to ensure the protection of Maori claims prior to any land transfers, suggesting the possibility of conditional transfers to third parties and an opportunity for Maori comment on transfers.[224] Because it concerned provisions in the SOE Act, the case clearly does not reverse the longstanding rule that the Treaty of Waitangi is unenforceable absent domestic legislation implementing it.[225]

The case can hardly be limited to one of simple statutory construction, however. Suggested as being the "case of the century" by one commentator[226] and termed "perhaps as important for the future of our country as any that has come before a New Zealand Court" by the President of the Court of Appeal,[227] the case will produce considerable restructuring of Maori-Pakeha legal relationships, assuming that Parliament continues to enact provisions like section 9.[228]

The opinions in the case[229] go far toward giving meaningful content to the "principles" of the Treaty of Waitangi. The overriding principle is that of a partnership; the parties stand in a fiduciary-like relationship with each other.[230] Accepting earlier pronouncements of the Waitangi Tribunal as authoritative, President Cooke stated that the mutual duty imposed by the treaty principles is to act reasonably toward each other, in the "utmost good faith."[231] Importantly, the partnership requires the Crown not merely to refrain from undertaking prejudicial actions but "extends to active protection of Maori people in the use of their lands and waters to the fullest extent practicable."[232]

The Maori Council case also points toward the way the continuing partnership will evolve in the future. First, the Waitangi Tribunal interpretations were accepted as authoritative, entitled to "much weight," although not binding on the courts.[233] Second, the court endorsed the notion that the treaty principles should be interpreted liberally and as an aid to ambiguous legislation:

> [The treaty] should be interpreted widely and effectively and as a living instrument taking into account of the subsequent developments of international human rights norms; and ... the Court will not ascribe to Parliament an intention to permit conduct

inconsistent with the principles of the Treaty."[234]

Liberal use of the treaty as an interpretive aid recently led one court to require consideration of Maori spiritual values in water rights decision making, despite the lack of mention of Maori concerns or treaty principles in the Water and Soil Conservation Act.[235] Third, the court signaled its intent to play an active role in overseeing "a reasonably effective and workable safeguard machinery" to protect Maori claims in land transfers under the SOE Act, by requiring the Crown to devise a system, submit it to the Maori Council for comment, and lodge a draft with the Court of Appeal for its review.[236] This sort of ongoing judicial supervision of Crown policymaking is quite unusual and may prove to be among the most enduring legacies of the case.[237]

In December 1987 the government reached a settlement with the Maori Council plaintiffs which included (1) establishment of a Maori Land Information Office to assemble records of utility to Maori claims; (2) expanded membership, staff, and support for Waitangi Tribunal; (3) legal aid for Maori claimants; (4) a standing Cabinet Committee to facilitate settlement of Maori grievances and implement Waitangi Tribunal recommendations; (5) a promise to limit transfers of water rights to state enterprises to a maximum of 35 years; and (6) introduction of a bill aimed at establishing the systematic safeguards for which the Court of Appeal called.[238] The bill gives the Waitangi Tribunal the power to make binding recommendations for the return to Maori ownership any land transferred to a state enterprise, requires the tribunal to consider land claims as if the land had not been transferred, and precludes state enterprises or the successors from being heard by the tribunal regarding their interest in transferred land.[239]

The Court of Appeal had no occasion to address the issue of fishing rights in the Maori Council case, and it expressly left open the question of whether Maori customary title enjoys common law protection.[240] However, fishing rights claims have been recently addressed by the Waitangi Tribunal, lower courts, and a joint government-Maori working group commissioned to report on how Maori fishing rights may be effectuated.

F. Maori Fishing Rights in the Wake of the Maori Council Case

Even before the Court of Appeal's decision in Maori Council, the Waitangi Tribunal and the lower courts were employing statutory interpretation to vindicate Maori fishing rights. In a series of reports the tribunal found violative of treaty principles the following activities: (1) existing pollution from the Waitara sewage outfall that was damaging valuable fishing sites, as well as proposed new discharges and a new outfall to accommodate petro-chemical industries;[241] (2) the proposed Kaituna River sewage pipeline which would have degraded Maori fishing grounds;[242] and (3) the Manukau Harbor plan which neither gave sufficient weight to Maori culture and fishing interests nor was detailed enough to ensure improvements in harbor water quality.[243] None of the proposals the tribunal found inconsistent with the treaty principles has proceeded, and many of its suggested remedial measures have been adopted.[244] In the wake of the Maori Council case, the tribunal's conclusions in these claims are now entitled to much judicial weight.[245]

In the Manukau Claim the tribunal indicated that the lack of ownership of lands below high water was not the chief impediment to recognition of Maori fishing rights, suggesting that such rights were legislatively recognized in the past and there was sufficient authority under the Fisheries Act regulations to do so now.[246]

Legislative recognition could serve to correct the judicial misapprehension that fishing rights cannot exist apart from ownership of the underlying land,[247] but legislative action should not be a prerequisite for common law recognition of Maori customary fishing rights. In a number of articles Paul McHugh has forcefully demonstrated that Maori fishing rights were recognizable at common law, are unconnected to land ownership, have never been legislatively extinguished, and indeed have received affirmative legislative recognition.[248] This view was adopted by Judge Williamson in Tom Te Weehi v. Regional Fisheries Officer,[249] a High Court case antedating the Maori Council decision.

In Te Weehi a Maori was prosecuted for harvesting undersized shellfish off Motunui Beach in violation of Fisheries Act regulations. The harvesting was in accordance with local Maori custom, which allowed subsistence fishing but not commercial harvesting and imposed conservation measures. Relying on Symonds, Lundon, and Kauwaeranga,[250] Judge Williamson concluded that English common law recognized that "the local laws and property rights of [indigenous] peoples in ceded or settled colonies were not set aside by the establishment of British sovereignty."[251] He also determined that (1) customary fishing title was legislatively recognized by the 1877 Fish Protection Act and its successors,[252] (2) fishing rights could exist independent from land ownership,[253] and (3) they persist until extinguished by "clear and plain" legislation.[254] By classifying fishing as "non-territorial" in character, as advocated by McHugh,[255] Judge Williamson was able to see that there was no inconsistency between recognizing Maori customary fishing rights and Crown ownership of tidelands, since the fishing right is merely a servitude -- a profit a prendre -- that burdens the Crown's fee. If upheld by the Court of Appeal, this recognition would give common law protection to Maori fishers who could prove customary use and exempt them from Fisheries Act regulations and quotas.

Although Judge Williamson emphasized the non-commercial nature of the shellfish harvest at issue in Te Weehi, Maori fishing rights almost certainly include a commercial dimension. The report of the Waitangi Tribunal on the Muriwhenua Claim concluded that the tribe not only made "full and extensive" fishing use of the seas out to at least 12 miles (and "occasional" use beyond), and that they regulated and controlled harvests (they "exercised dominion" over the seas), but that their entire economy and social network was built upon sea harvests.[256] The tribunal found that (1) the Maori were commercial fishers; (2) the treaty committed the Crown to actively protect those fisheries and envisioned that the Maori would profit from white settlement; and (3) the treaty right includes a right to develop and adapt to new technologies, new species, and even new fishing areas (such as the offshore).[257] Determining that the seas were owned by Muriwhenua in the same way that land was, and that they authorized non-Maori harvesting for domestic purposes, the tribunal concluded:

> The essential principle was that despite the projected settlement, Maori would not be relieved of their important properties without an agreement, and for their protection, there was a duty on the Crown to ensure that they retained sufficient [property] for their subsistence and well-being ...

"An opinion that Maori cannot have it both ways, the advantages of new technologies as well as privileges in traditional fishing, does not come from the Treaty, for that is precisely what Maori bargained for." Id. at 238. See also id. at 234 (citing Simon, above note 106, for recognition of the right to develop); C. Wilkinson, American Indians Time, and the Law 68-75 (1987) (on the right to develop).

> In terms of the Treaty, it is not that the Crown had a right to licence a traditional [Maori] user. In protecting the Maori interest, its duty was rather to acquire or negotiate for any major public use that might impinge on it. In the circumstances of Muriwhenua, where the whole sea was used, and having regard to its solemn undertakings, the Crown ought not to have permitted a commercial user at all, without negotiating for some greater right of public entry. It was not therefore that the Crown had merely to consult, in the case of Muriwhenua; the Crown had rather to negotiate for a right.[258]

As a result, the tribunal determined that a "quota management system,"[259] the fulcrum of a revolutionary system governing fishery harvests but which failed to take into account Maori commercial fishing, was in "fundamental conflict" to the treaty's principles and terms.[260]

Due to the judicial deference owed the Waitangi Tribunal's conclusions,[261] the quota system as it affects squid and jack mackeral harvesting by the Muriwhenua tribe was enjoined on the same day the tribunal's interim report was filed.[262] A month later Ngai Tahu Maori Trust Board v. Attorney General[263] restrained any further implementation of the new management regime throughout the country, essentially agreeing with the tribunal that (1) in 1840 the Maori had "a highly developed and controlled fishery over the whole coast of New Zealand," (2) this fishery contained a commercial component, (3) there was no evidence that the Maori gave away or waived their fishing rights since 1840, and (4) these rights not only were not legislatively extinguished but were legislatively protected by section 88(2) of the Fisheries Act.[264] Judge Greig adopted the rule employed by Judge Williamson in Te Weehi that extinguishment of native common law fishing right requires express legislative directive,[265] and he also suggested that the protection contained in section 88(2) implied legislative recognition of those rights, subject to "proof of their existence, their scope and their extent."[266] By assuming that Maori fishing was merely of a ceremonial and recreational nature, and thus outside the quota management system, the government breached the native rights recognized by the Fisheries Act.[267]

G. Negotiating Maori Fishing Rights

In the wake of the Ngai Tahu decision, the New Zealand government initiated negotiations with the Maori Council and individual tribes in an effort to avoid further litigation. The result was the establishment in December 1987 of a joint working group composed of both Crown and Maori members, to recommend a settlement of Maori fishing claims.

On June 30, 1988, the joint working group submitted its recommendations. Perhaps not surprisingly, the Crown and the Maori members were badly divided on the substance of the settlement, and submitted two separate reports. The Crown members proposed a reversion of the quota management system; all individual quotas to be held by a corporation in which Maori own 25% of the stock (although Maori would appoint 3 of the 7 corporation directors); and other benefits, such as job training and allowance for small scale or part-time fishers, estimated at 4% of the resource. This 29% total was derived from allocating to Maori all the inshore (within 12 miles) fisheries and 12-1/2% of the high seas fisheries (based on the Maori percentage of population in 1986).[268]

The Maori members rejected the Crown proposal, criticizing its emphasis on monetary pay-

---

258. Muriwhenua Report, above note 162, at 216-17 (emphasis added).

259. Under the quota management system authorized by § 10 of the Fisheries Amendment 1986, the Minister of Agriculture and Fisheries may declare commercial harvesting of specified species subject to its provisions. The system is then implemented by a 2-step process: (1) the Minister establishes a total allowable catch for each species, and (2) individual transferable quotas (ITQs) are issued to individual fishermen, based on historic catch. The ITQ system is essentially a property rights solution to fishery regulation, since once the initial allocation of quotas is made, the theory is that the market will determine who will fish, the government's role being limited to setting the total allowable catch (which necessarily must include a run size estimate and an estimate of how many fish must escape for conservation purposes). See Sandrey, "Maori and Pakeha: Land and Fisheries," Agribusiness and Economic Research Unit, Discussion Paper No. 109 (Lincoln College) at 26-7; see also Muriwhenua Report, above note 162, at 140-54.

260. Id. at xx, 239. The tribunal emphasized that the quota system, as applied, created the conflict, and it suggested that Maori interests could be accommodated within the system. Id.

ment without a guarantee of access to the fisheries, its locking Maori into a minority position in the corporation, and its reliance on 1986 population statistics to allocate rights to the offshore fishery. While asserting that the Maori are legally entitled to 100% of the fisheries, the Maori working group members proposed that Maori would offer 50% to the Crown in return for recognition of equality of Maori ownership and management and control. The Maori proposal suggested that a modified transferable quota system in which 50% of individual quota was allocated to Maori was an acceptable alternative.[269]

As of this writing, no final settlement had been reached.

H. The Environmental Right

No New Zealand court has addressed the issue of whether Maori fishing rights include a right of environmental protection, but the Court of Appeal's deference to the findings of the Waitangi Tribunal in Maori Council leaves little doubt that there is such a right. The tribunal has indicated that the principles of the Treaty of Waitangi would be violated by developments such as power plants and sewage outfalls, plans that do not account for Maori interests, and existing facilities polluting Maori fishing grounds.[270] Given its retrospective jurisdiction and its expanded powers and resources,[271] the tribunal will clearly be presented with a number of opportunities to articulate the scope of the right. While it may be aided by the opinions of Judges Orrick and Reinhardt,[272] the Waitangi Tribunal almost certainly will be forced to formulate a definition of the environmental right before the U.S. and Canadian courts finally resolve the issue.

The flexibility both the tribunal and the Court of Appeal have found inherent in the treaty principles[273] should help in articulating the environmental right, just as it will in enunciating the scope of the harvest right. The tribunal has already indicated that the treaty's capability to adapt to new circumstances means that the treaty partners need not "regard all Maori fishing grounds as inviolate."[274] Thus, the treaty principles will not foreclose all development, any more than they will eliminate all non-Maori fishing. The overriding treaty principle, as the Court of Appeal indicated, is one of partnership -- in both use and control of the resources subject to its terms. It seems evident that this precept has moved New Zealand, which long denied their existence, into the forefront of the international movement to protect and restore native fishing rights.

IV. Conclusion

The native right to harvest fish has evolved distinctly in each of the 3 jurisdictions analyzed in this study. In the U.S., treaty promises enforceable by federal courts under the U.S. Constitution produced a long line of court victories, although only within the last decade have the tribes actually secured a significant percentage of the harvest. The initial resistance of non-Indian fishers to the treaty right has diminished as the environmental protection implicit within the right promises to benefit both Indian and non-Indian fishers. Moreover, recognition of the tribes as resource managers as well as harvesters has, while complicating management, also induced better decision making by requiring better data and more publicly accountable decisions. The treaty right even fostered an international agreement to better manage harvests and national legislation designed to double run sizes. There is little question that the beneficiaries of the treaty right to fish are not limited to the signatory Indian tribes.

In British Columbia, the native right to fish has evolved more slowly. But Canadian Supreme Court decisions like Calder and Guerin and the 1982 Constitution Act's recognition of existing aboriginal and treaty rights signal a new era. The Sparrow decision, now on appeal to the Canadian Supreme Court, seems likely to indicate the direction that era may take. Although the British Columbia Court of Appeal in Sparrow appeared to deny a commercial component to the fishing right, other decisions are remarkably consistent with U.S. precedent in affirming the environmental dimension of the right. No court decision has recognized the Indian tribes as legitimate resource managers, however. But recent comprehensive land claims settlements in the Canadian North offer hope that that aspect of the right can be defined by bilateral negotiations rather than protracted litigation.

In New Zealand the pace of recent events has been fairly stunning. Court decisions, advisory tribunal opinions, and legislative provisions have combined, within a couple of years, to produce the prospect of a substantial commercial Maori fishery in a nation that denied significant Maori fishing rights for over a century. Although negotiations have failed to produce agreement on the precise scope of the Maori right, if the recent opinions of the Waitangi Tribunal are not dismissed, it seems reasonable to expect a Maori fishing right that includes a commercial component, management authority, and environmental protection. Clearly, the chief force behind the rapid evolution of the Maori right has been the Waitangi Tribunal, whose reports have been deferred to by both the courts and Parliament.

Despite peculiarities among the jurisdictions, such as the Waitangi Tribunal, the Canad-

269. Report of the Maori Members of the Joint Working Group on Fisheries to Maori and Crown (June 30, 1988).

270. See above notes 212-13, 241-43 and accompanying text.

271. See above notes 214, 238-39 and accompanying text.

272. See above notes 30-34.

273. See above note 234 and accompanying text.

274. Waitangi Tribunal, Motunui Claim, above note 234.

ian Constitution Act, and the Stevens Treaties, the essential similiarity of the native fishing right in all 3 nations should not be overlooked. All now recognize, however belatedly, the common law nature of the right. That is, the right springs from native use and custom from time immemorial, not from governmental creation. Constitutional, statutory, and treaty recognition of the right may help to interpret the nature of the right or clarify its scope, but they did not create it. The fishing right pre-dated governmental recognition, and the common law -- which all 3 nations inherited from England -- was fully capable of protecting native customary practices as property rights. It was, in fact, the common law's recognition of native property rights which induced governmental action, not vice versa.

The common law role in the articulation of native rights reveals a good deal about the role of courts in educating and inducing action on the part of more representative bodies of government. It also links the 3 former British colonies in the legal tradition they share and may help to encourage international cooperation on common problems which the 3 jurisdictions share. Perhaps even more important, recognition of the common law underpinnings of native rights may help other former British colonies which have denied their existence, notably Australia,[275] to see that they are fundamentally out of step with the common law tradition.

The Anadromous Fish Law Memo is an aperiodic publication of the Lewis and Clark Law School's Natural Resources Law Institute, edited by Professor Michael Blumm, assisted by Marlyn Twitchell, Class of 1988, and superbly typed by Lenair Mulford. The Memo is supported in part by the U.S. Department of Commerce through the Oregon State University Sea Grant College Program. Those wishing to be placed on the mailing list or to receive back issues should contact:
